

Online API using the TEST element

Include element **<Test />** in ALL requests.

Example:

```
<RMSPropertyRQ>  
  <AgentId>1</AgentId>  
  <RMSCientId>3038</RMSCientId>  
  <Test />  
</RMSPropertyRQ>
```

When sending a booking request, use the following credit card number in the **<PaymentDetails>** element:

```
<PaymentDetail>  
  <HolderName>Test Test</HolderName>  
  <CardType>Visa Credit</CardType>  
  <Number>4557013000314262</Number>  
  <CCVCode>321</CCVCode>  
  <ExpireDate>12/12</ExpireDate>  
</PaymentDetail>
```

When testing with a real credit card in test, enter the card number in the **<Number>** element. The booking will only process if the card number is valid. No charges will be taken while the test flag is set.

Online API without using the TEST element

Not including element **<Test />** in ALL requests.

When sending a booking request, use the following credit card details in the **<PaymentDetails>** element (If either are present, booking will be treated as a test):

```
<PaymentDetail>  
  <HolderName>RMSONLINETESTBOOKING</HolderName>  
  <CardType>Visa Credit</CardType>  
  <Number>4557013000314262</Number>  
  <CCVCode>321</CCVCode>  
  <ExpireDate>12/12</ExpireDate>  
</PaymentDetail>
```
